

## AAO 2019 PHYSICIAN LUNCH

Join leading glaucoma expert Mahmoud Khaimi, MD (Dean McGee Institute, University of Oklahoma), in San Francisco during AAO 2019 for an intimate lunch to discuss the role of iTrack™ canal-based glaucoma surgery. A restorative, implant-free ab-interno procedure, iTrack™ canal-based surgery can be performed stand alone - and in conjunction with cataract surgery and/or MIGS.

of Racine & Kenosha

Karl Stonecipher, MD  
Greensboro, NC

For nearly 30 years we have been using YAG lasers for the removal of posterior capsular opacification (after cataract) and densifications in the anterior portion of the vitreous humor. In 2012 the company Ellex® released an advanced YAG laser system, Ultra Q Reflex™, perfectly achieving the placement of the monitoring beam, the lighting beam, and the laser on one axis. This has contributed to making it the ideal instrument for the treatment of strands and opacities in the vitreous humor.

Join the International Ophthalmic Floater Society (IOFS) at AAO 2019 to discuss how this, and other advancements, have improved our opportunities for floater treatment:

## AAO 2019 BREAKFAST SYMPOSIUM
